ANALYSIS OF A FOOD DELIVERY AGENT

Identify the problem in the context of Agent:-

A Food Delivery agent helps customers order food from restaurants & get it delivered to their location.

FORMULATE A PROBLEM:-

1 (Textual Representation)

Input:

- Customer's food order
- Customer's location
- Restaurant information
- Payment method

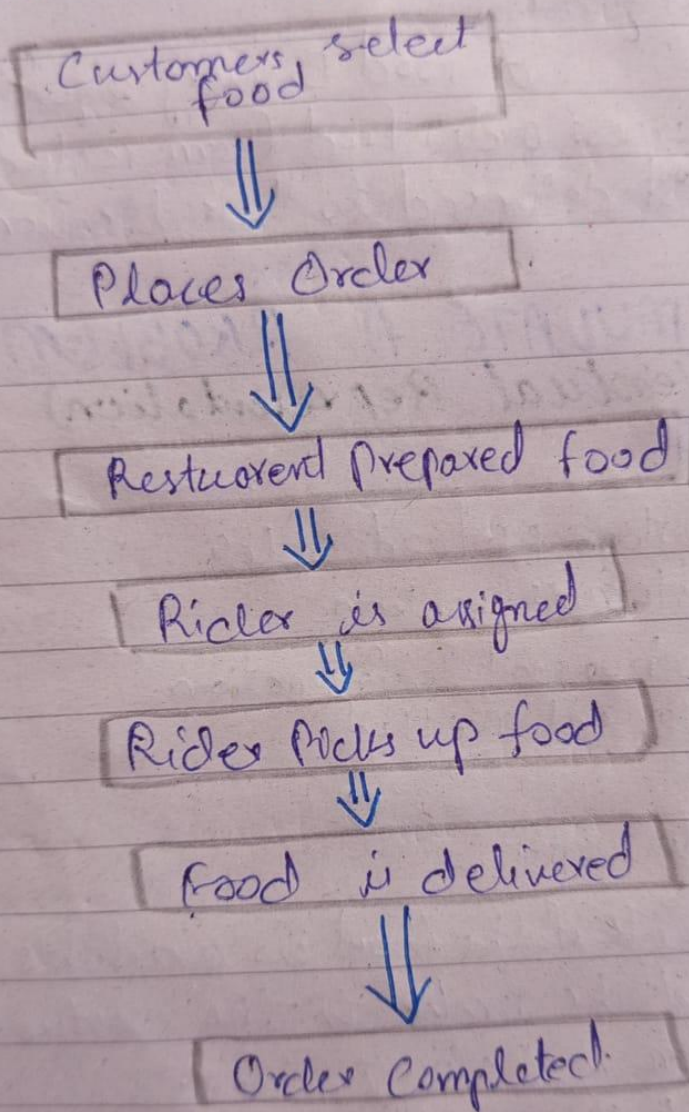

Agents work:

- check if the food is available
- Send the order to the restaurant
- Assign a Delivery rider.
- Track the order.

Output:

- order confirmation
- estimate delivery time
- Food delivered to the customer

2 Graphical Representation,

3) Sequential:

One action effects a next action.

Example (The restaurant prepares the food first then rider picks order & deliver it)

4) Dynamic:

Environment can change while agent is working

Example (Traffic, order status can change)

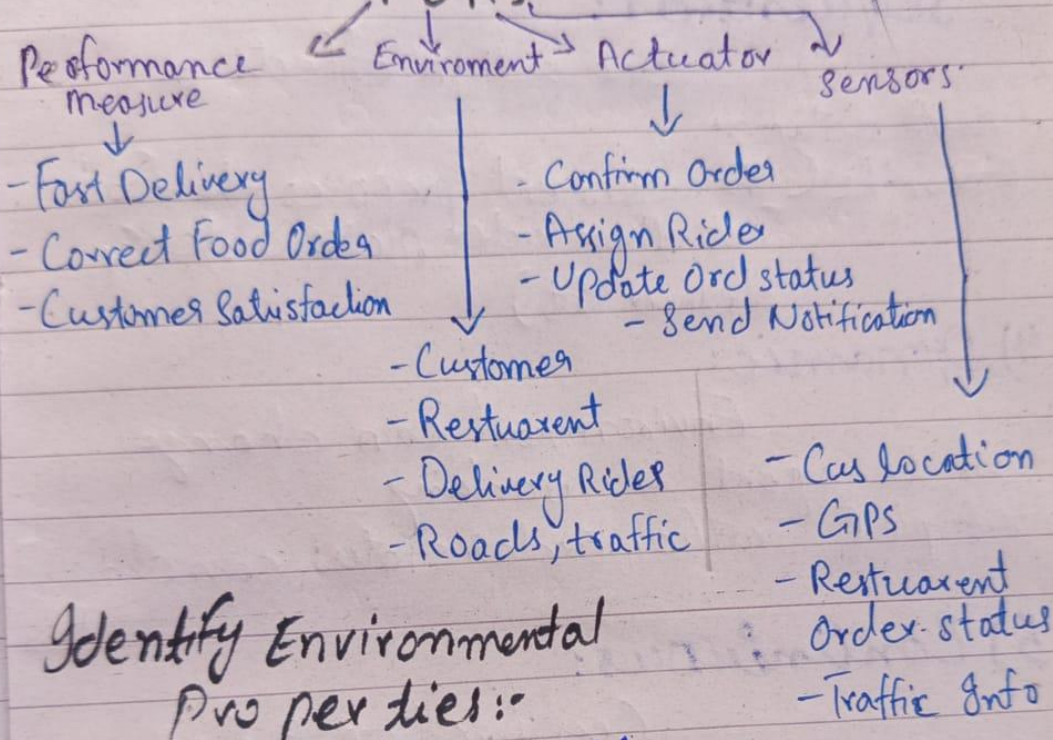

5) Continuous:

Cus location, Rider location, Delivery time can continuously change.

6) Multi Agent

- Multiple participants in Environment like Customer, restaurant, Delivery Rider & food Delivery system.

Evaluate In the Context of PEAS

Identify Environmental Properties:-

1) Partially Observable

Agent doesn't have a complete info about Environment.
eg (Sudden traffic, Road probs).

2) Stochastic:

- Delivery time change cause of traffic, weather etc.
